

Size Specifications: Cahoots Photo Books

Please note that cover sizes are approximate. Exact positioning of artwork is subject to small variations during book finishing. Additionally, cover positioning is somewhat dependent upon spine thickness. For these reasons, it may be preferable to design the cover in Cahoots software, even if other pages are placed one per page as full bleed JPEGs. If you design your cover in another program and use full or partial bleed images, keep any important content away from the edges of the cover (as positioning may not be exact). Upon request, we can also supply a PDF of an existing cover, to use as a template (but note that spine width may have some impact on the final book – a standard 40 page book will have an 8mm spine, or 10mm if layflat).

Your book should start with a half spread (facing page), and finish with another half spread as the final page. (Printing on inside covers is not possible.)

Note also that supplied files should be in sRGB colour space.

A nominal fee applies for setup of files created outside of our Cahoots Easy Designer photobook software (generally in the order of \$20, provided there are no issues).

Standard Page Dimensions

These non-layflat books lose content in the gutter of the book, whereas layflat books, by their nature, will show more or less all content (+/- 0-2mm). If designing for layflat paper, use the page dimensions on the following page instead.
